

Planets, planets everywhere!

Start date 15 April 2018 **Time** 10:00 – 16:45

Venue Maddingley Hall
Maddingley
Cambridge

Tutor Dr. Sonali Shukla **Course code** 1718NDX051

Director of Programmes Emma Jennings
For further information on this course, please contact Public Programme Coordinator, Clare Kerr
clare.kerr@ice.cam.ac.uk or 01223 746237

To book See: www.ice.cam.ac.uk or telephone 01223 746262

Tutor biography

Dr. Shukla holds a PhD in astrophysics from Vanderbilt University, USA. Her research areas include understanding the formation of young low-mass stars and protoplanetary disks as well as brown dwarfs. She spent a year as a pre-doctoral fellow at the Spitzer Science Center, Caltech, and continued her research as a postdoctoral researcher at Penn State University. She primarily works in education and public outreach, having worked most recently as the Astronomy Outreach Assistant at the Institute of Astronomy at the University of Cambridge. Previously, she served as Assistant Director for the physics department at the University of Maryland, where she developed novel outreach and educational programs, particularly to increase inclusion and diversity of students in the physical sciences. Dr. Shukla has developed inquiry-based practical exercises that incorporate real astronomical data whenever possible.

Course programme

09:30	Terrace bar open for pre-course tea/coffee
10:00 – 11:15	What is a planet and why isn't Pluto one anymore?
11:15	Coffee
11:45 – 13:00	Exploring the solar system with satellites and robotic missions
13:00	Lunch
14:00 – 15:15	Exoplanets: Discovering planets beyond the Sun
15:15	Tea
15:30 – 16:45	Are we alone in the universe? The emerging science of astrobiology
16:45	Day-school ends

Course syllabus

Aims:

This course aims to:

- 1) Provide the historical context for understanding the discovery of and classification of planets in our own solar system.
- 2) Give a comprehensive overview of the manned and unmanned space missions and the novel technologies that have developed from space exploration.
- 3) Understand how astronomers have found planets around other stars, with the opportunity to examine real data, and to understand the variety of such planets.
- 4) Explore the possibility of life on other planets and the emerging science of astrobiology.

Content:

Since antiquity, people have looked to the skies and wondered about the planets. In this course, we will learn the origin of the word planet and how the working definition of a planet has changed over the last few centuries. We will discuss how astronomers have explored our own solar system using manned missions to the Moon, satellites and through robotic missions. We will then learn how astronomers detect and characterise planets around other stars, and how the new science of exoplanets has evolved since the first confirmed discovery of an exoplanet over 20 years ago. Finally, we will discuss how common planets are around other stars, and how astronomers ascertain the likelihood that life might exist on other planets.

Presentation of the course:

This course will consist of a combination of Tutor-led lectures and group discussion. Time-permitting, there will be short Tutor-led group exercise to illustrate astronomical techniques.

As a result of the course, within the constraints of the time available, students should be able to:

- 1) understand the basic physics and astronomy of our solar system
- 2) gain a broad perspective of planetary exploration and its feasibility in our solar system
- 3) understand the advances in finding planets around other stars in the last decade
- 4) be able to understand popular space news items and differentiate what makes an astronomy story newsworthy.

Reading and resources list

Listed below are a number of texts that might be of interest for future reference, but do not need to be bought (or consulted) for the course.

Author	Title	Publisher and date
Weintraub, David A.	<i>Is Pluto a Planet?</i>	Princeton University Press 2008
Sobel, Dava	<i>The Planets</i>	Harper Perennial 2006
Boss, Alan	<i>The Crowded Universe: The Search for Living Planets</i>	Basic Books 2009
Perryman, Michael	<i>The Exoplanet Handbook</i>	Cambridge University Press 2011

Comprehensive overview of exoplanets: <https://exoplanets.nasa.gov/>

NASA Exoplanet Archive: <https://exoplanetarchive.ipac.caltech.edu/>

Additional information

Venue

Details of how to find Madingley Hall can be found on our website:

<http://www.ice.cam.ac.uk/who-we-are/how-to-find-the-institute>

Refreshments

Tea and coffee and lunch will be provided. If you have any specific dietary requirements or allergies and have not already advised us, please inform our Admissions Team on ice.admissions@ice.cam.ac.uk or +44 (0)1223 746262.

Note Students of the Institute of Continuing Education are entitled to 20% discount on books published by Cambridge University Press (CUP) which are purchased at the Press bookshop, 1 Trinity Street, Cambridge (Mon-Sat 9am – 5:30pm, Sun 11am – 5pm). A letter or email confirming acceptance on to a current Institute course should be taken as evidence of enrolment.
