Postgraduate Certificate in Practical Science Communication

2020-2021

Course code: 2021PCB231

COURSE GUIDE

University of Cambridge Institute of Continuing Education, Madingley Hall, Cambridge, CB23 8AQ

Tel 01223 746222  www.ice.cam.ac.uk
Welcome to the **Postgraduate Certificate in Practical Science Communication**, a University of Cambridge award offered by the Institute of Continuing Education (ICE). The Certificate is taught and awarded at FHEQ level 7 (i.e. postgraduate level) and attracts 60 credits. It is completed in one academic year. For further information about academic credit please see our website: [www.ice.cam.ac.uk/studying-with-us/information-for-students/qualifications-that-we-offer](http://www.ice.cam.ac.uk/studying-with-us/information-for-students/qualifications-that-we-offer).

Science communication is an important part of scientific endeavour. Many scientific institutions and businesses see communicating science as part of their core mission. These missions cover a wide range of activity: in developing countries, for example, science communication not only supports the roll-out of new technologies to make people’s lives healthier and easier, but also contributes to campaigns to reduce exploitation and preserve the environment. In the industrialised West, science communication has become part of marketing for big business, fundraising for medical charities, and policymaking in areas such as agriculture, energy and transport. Scientific expertise provides the information for communication professionals; and, often, the experts themselves are being called on to communicate directly with the public.

This Postgraduate Certificate in Practical Science Communication is designed to support people working in contexts such as these. Students might be:

- Working or training as scientists and looking to extend their skill-set
- Working in science communication and looking for an opportunity to reflect and develop in a supportive environment
- Wanting to study science communication, but alongside their present commitments
- Looking to think about science and society in new ways.

The course focuses on the core skills and knowledge that bring science communication efficiently into the students’ repertoire of professional and life skills. Organised into day-schools, and accompanied by online distance learning, the course is delivered in three one-term units, and an indicative syllabus and a reading list for each of these units are included in this course specification.

There is a substantial literature in science communication, academic and practical. A full bibliography will be made available in the Virtual Learning Environment (VLE) that will support the course. Doing some further reading will give students a broader range of tools, alert them to a wider variety of perspectives, and equip them with a deeper academic appreciation of the subject. Making reference to the literature will be essential for some if not all assessments. Students who are considering further study after their PG Cert are especially encouraged to read from the recommended lists. Other specific short readings will be recommended at the start of the course.

The extensive resources of the University Library will be accessible to students on this course, both in person and online. Students are advised to explore the Library’s iDiscover service before deciding to buy any study materials.

As the course develops over the year, students will find the VLE and online library resources increasingly useful, both for their own learning and for keeping in touch with
classmates and tutors. It is worth spending some time learning how to use these resources early on in the course.

There is potential for public lectures relevant to science communication studies to be scheduled in the evenings of the day schools. These lectures would be freely available to PG Cert students, and open to others by ticket.

The course aims to:

- enhance the students’ systematic knowledge and critical understanding of the importance, relevance and diversity of science communication in the world.
- increase students’ understanding of the academic and theoretical knowledge that underpins effective communication and engagement, including fundamental issues and current debates in communication theory, sociology, politics, ethics, psychology and history of science.
- develop students’ ability to critically evaluate subject matter to identify what is relevant and appropriate for public communication.
- enable students to describe and critique key practical techniques and approaches used for science communication.
- create an enquiring perspective to enable critical and evaluative discussion that extends student understanding of key ethical and moral issues in the communication of science.
- develop an appropriate understanding of the available methods for communicating with and engaging new audiences with diverse professional, specialist and non-specialist backgrounds and to understand how and when to apply these methods.
- provide an understanding of the requirements and importance of science communication in terms of the Impact agenda in Higher Education.

The students will:

- gain discipline-specific skills for the delivery of a wide-range of science communication approaches.
- work constructively and sensitively with others in particular social and political contexts.
- gain skills for all stages of science communication activity, including designing, proposing, seeking funding for and evaluating the activity.
- respect audiences’ needs and interests, and strive for social justice.

**General skills for further study and employability**

In general:

- The capacity for independent thought and judgement
- The development of independent learning, study and time-management skills
- The deployment of skills in critical reasoning
- The development of competence in using relevant IT
- The ability to work with others, productively and equitably
• The capacity to exercise some personal responsibility and demonstrate appropriate levels of motivation and personal commitment through part-time study.

Specifically from studying science communication:

• Alertness to the workings, uses and effects of the mass media and other communication channels
• The capacity to use words, numbers and images to communicate meaningfully to a variety of audiences
• The ability to structure, express and deliver particular messages
• The ability to select and combine appropriate media for particular tasks
• The skill of finding stories and background information from professional, mass-media and live sources
• The ability to pitch an idea and persuade other agencies to support it
• The competence to plan, schedule and deliver a project, with respect for regulation, practical limitations and cultural sensitivities
• The ability to liaise with a range of professionals and publics
• The sensitivity to respond to a range of social needs, and to take responsibility for outcomes.

Study hours

The award of academic credit is a means of quantifying and recognising learning. In the UK, one credit notionally represents 10 hours of learning\(^1\). Each of the units in this course attracts 20 credits so students should expect to need to study for approximately 200 hours in total to complete each unit successfully. However, it is recognised that students study at different paces and use a variety of approaches, so this is a recommendation, rather than a hard-and-fast calculation.

Some of these study hours will be taken up with small tasks in advance of certain classes, such as collecting science communication items, writing a short note about their personal experiences or expectations, or making a start on an original piece of science communication to share with the group. These tasks will not be credit-bearing but will equip the students to make best use of the course.

Assignments for credit play an important role in learning. Submission will be to pre-arranged deadlines and, where possible, online. For any problems with submission of assessment (such as illness or other personal problem), the procedure is as set out in the Institute’s student handbook, at www.ice.cam.ac.uk/info/student-handbook.

Teaching staff

Dr Jane Gregory (Course Director) developed science communication courses for Imperial College in the early 1990s, and since then has set up and taught UG and PG courses at Birkbeck, UCL and Manchester University. She has published on the role of public science communication in the development of scientific ideas, and on the global political and economic contexts for science communication. Jane has also worked in science
publishing and for the Science Museum, London. In 2019, she was Chair of the judging panel for the British Society for the History of Science’s Hughes Prize for popular writing about the history of science.

Dr Tom Monie is the Academic Director for STEM at the Institute for Continuing Education and a Fellow of Christ’s College, Cambridge. He has held a Wellcome Trust Research Career Fellowship at the University and led a research group studying the innate immune system. He has a long-standing interest in science communication and has been involved in the design and delivery of numerous courses on science writing, storytelling, audience engagement and effective communication. He has delivered a number of activities and events for the Cambridge Science Festival and is, slowly, writing his first popular science book.

Specialist professional teaching is delivered by guest tutors. In previous years, these have included:

Jack Ashby, Museum of Zoology, University of Cambridge
Craig Brierley, Research Communication Office, University of Cambridge
Dr Nicola Buckley, Centre for Science and Policy, University of Cambridge
Dr Steve Cross, Bright Club/Science Showoff
Dr Eric Jensen, University of Warwick
Elizabeth Killen, Faculty of Education, University of Cambridge
Dr Simon Lock, University College London
Dr Chris Smith, the Naked Scientist, University of Cambridge
Lucinda Spokes, Public Engagement Office, University of Cambridge
Dr Ed Turner, Museum of Zoology, University of Cambridge

Administrative staff

Head of Academic Centre Administration: Ms Gillian Barclay, t. 01223 760063

Academic Centre Coordinator: Ms Lizzie Burgess, t. 01223 760864

Email: pg-stem@ice.cam.ac.uk

Venue

Madingley Hall is the University’s campus dedicated to continuing education for adults. The Hall was built in the sixteenth century and acquired by the University in 1948. It has been home to the Institute of Continuing Education since 1975.

Classes will be taught in one of 14 classrooms at Madingley Hall and, occasionally, at other venues. Classrooms are arranged and equipped to encourage effective small group learning and peer interaction. Technology-enhanced learning, including lecture capture where appropriate, is used in many classes, and wi-fi is available throughout the site. We also provide a range of social learning spaces that students can use before, or after, class.
Seven acres of superb gardens and grounds designed by Capability Brown provide space to think, reflect and relax. We offer a range of catering including formal dining, sandwiches and snacks, and a full-service bar. Students travelling a long distance may wish to book accommodation in one of the Hall's 62 en-suite bedrooms.

The Hall is situated three miles west of Cambridge with easy access from the M11 and the A14. There is ample free on-site car parking. Central London and Stansted Airport can be reached in under an hour by train from Cambridge railway station. Taxis from the railway station to Madingley Hall typically take around 20-25 minutes. Full directions are given on our website at: http://www.ice.cam.ac.uk/about-us/how-find-us.

Please also refer to the ‘information for students’ section on ICE’s website www.ice.cam.ac.uk/studying-with-us/information-for-students and the 2020/21 Student Handbook for award-bearing courses for further information and guidance relating to all aspects of the course including study skills, assignments, assessment and moderation. The Course Information and Help and Guidance section of the ICE VLE will also contain valuable information specific to your course.

Information correct as at 21 January 2020
Unit 1

The fundamentals of practical science communication

Start date 21 October 2020
Day 21, 22 and 23 October 2020
End date 23 October 2020
Time 9.30 - 17.00 each day
Venue Madingley Hall, Madingley, Cambridge, CB23 8AQ
Tutor(s) Dr Jane Gregory
No of meetings One 3-day teaching block

Aims

This unit will prepare the ground for students’ later practical work by:

- Providing students with the academic tools to handle the theoretical, historical and practical aspects of science communication.
- Developing knowledge and understanding of science communication, its methods and impacts.
- Instilling the ethical and critical awareness required to identify the importance, the relevance, and the problems of science communication from a professional perspective.

Indicative content

- **The history and politics of science communication**: what is it and whom does it serve? Developing an understanding of what science communication is and why it is important; connections with the Impact agenda in Higher Education.
- **Understanding audiences**: what happens to your message? The psychology and theory of effective engagement and communication.
- **Effective communication**: identifying, understanding and engaging your audience; the use of storytelling and narrative; key skills for science communication.
- **Science and the media**: roles, responsibilities and interests.
- **Why communicate what science and to whom?** Critical evaluation of science – choosing stories and approaches, and the ethical elements of science communication.
- **Becoming a critical consumer of science communication**: how to see, and what to learn.
Effective evaluation: how did it go? The design, delivery and success measures of science communication.

Presentation of the unit

Across the three days, the course will move from content delivery via lectures and seminars to participation in workshops and performances.

Students are expected to contribute to all types of teaching, including asking questions during lectures and contributing examples from their own experience. Some students embrace this style of learning more readily than some others, who may take their time to settle in.

Participation is essential for each student’s learning as well as for learning across the group. One important form of participation is listening: students will listen respectfully to others’ contributions and offer constructive criticism when appropriate.

It is usual in science communication studies to consider a range of worldviews, standpoints and understandings. Therefore, disagreement and argument are normal aspects of engagement with this subject, both within the University and beyond. It is important for both students and professional communicators to develop the skills to disagree and argue courteously and constructively.

During this unit students will begin working on small items of science communication (such as short articles, designs, or short recordings) that will be subject to formative assessment and will be credited at the end of the course as part of the Portfolio.

Student assessment

There are two summative assignments associated with the unit. Note that they are not equally weighted.

The first assignment will be a critical analysis of two items of science communication (1500 – 2000 words / 10 credits).

Closing date for the submission of assignment 1: Wednesday 18 November 2020 by 12:00 (noon) GMT

The second assignment will be a reflective piece on the student’s own learning about science communication during this unit (800 – 1000 words / 5 credits).

Closing date for the submission of assignment 2: Wednesday 2 December 2020 by 12:00 (noon) GMT

Students should submit their assignments online through ICE’s Virtual Learning Environment (VLE). Feedback on assignments is delivered online via the VLE.

Learning outcomes

When they have completed the unit, the students should have achieved the following outcomes:

Knowledge and understanding

• Enhanced knowledge and understanding of the role and application of theory to science communication practice
• Increased understanding of the political contexts that frame science communication
• Improved awareness of the academic literature that supports effective communication and engagement
• Improved understanding of how the needs of audiences frame science communication practice
• Insight into potential audiences
• Enhanced systematic knowledge and critical understanding of the significance, relevance and range of science communication in the global community
• Enhanced ability to critically evaluate subject matter to identify what could or should be reported in the public domain

Skills and other attributes

• Improved communication skills across a range of areas as well as in a specific area of interest
• Enhanced ability to match skills to media and audiences

Unit 2

The art of practical science communication

Start date 14 January 2021  End date 12 March 2020

Time 9.30-17.00 each day

Days 14 and 15 January 2021
4 and 5 February 2021
11 and 12 March 2021

Venue Madingley Hall, Madingley, Cambridge, CB23 8AQ

Tutors Dr Jane Gregory & guest tutors  No of meetings Three 2-day teaching blocks

Aims

This module will develop students’ capacity for competent professional practice by:

- Developing students’ competence in the core skills of writing and speaking.
- Encouraging adaptability towards a range of new and traditional media, with an emphasis on radio and podcasting.
- Using feedback and dialogue to respond to audience needs and preferences.
- Instilling respect for, and knowledge of, the legal, ethical and policy contexts that frame science communication practice.

Indicative content

- Core skills of writing and speaking: developing confidence and technique, and exploring the demands of different media and audiences.
- Communicating in museums: display, explaining, interactivity, informal education, visitor studies, hard to reach groups.
- Public events: meanings of ‘public’, communicating in public spaces, understanding festivals.
- Broadcasting in sound and vision: television, video, radio, podcasting.
- Online communication: visual and written content on the web; the challenge of the hyperlink; adapting to new media, such as YouTube, vlogging and Tweeting; communication in the ‘network society’.
- **Science journalism**: forms: news, features, comment; interviewing; public relations.
- **Communicating science for policy**: advice, activism, science for charities and interest groups.

**Presentation of the unit**

This unit will respond to the range of interests of the cohort. It combines background information and techniques explained by tutors with students’ active participation in workshops to develop their skills.

Students will, individually or in small groups, develop projects that illustrate and exhibit their knowledge and understanding of science communication practice. They will take on supporting roles in other students’ projects, and also act as ‘critical friends’ to classmates. A series of ‘showcase’ sessions will allow students to present their work to the group.

Students will study a range of techniques, media and audiences, although they may choose for assessment to focus on a more specific task or area.

Students will learn from tutors and visiting specialist professionals, and will scrutinise successful examples of science in the public domain to learn about professional standards and good practice.

Organisations that present science in public usually publish documents about their work such as mission statements, planning documents, accounts, visitor feedback and so on. Students are encouraged to read this ‘grey’ literature, which is usually readily available online.

**Student assessment**

There are two summative assignments associated with the unit and they are equally weighted.

The first assignment is a written insight or overview into a science communication tool or approach (1200 -1500 /7.5 credits).

The second assignment is a talk or video (featuring a performance by the student) delivered on 19 April 2021 (7.5 credits).

**Closing date for the submission of written assignments: Thursday 8 April 2021 by 12:00 (noon) British Summer Time**

Students are expected to submit their assignments online through ICE’s Virtual Learning Environment (VLE) and feedback on assignments is delivered online.

**Learning outcomes**

When the students have completed the course, they should have achieved the following outcomes:

**Knowledge and understanding**

- Improved awareness of the academic literature that supports effective communication and engagement
- Improved understanding of how the needs of audiences frame science communication practice
- Enhanced knowledge and understanding of pitching, proposing and evaluating science communication
- Increased ability to understand and respond to local schedules and regulation
- Awareness of professional and public standards
- Awareness of capacities and limits of given resources
- Insight into potential audiences

**Skills and other attributes**

- Advanced competence in the core skills of writing and speaking
- Enhanced familiarity with audio-visual and digital technology
- Enhanced capacity to be a critical friend to others’ work
- Enhanced ability to match skills to media and audiences
- Enhanced adaptable skills for the delivery of a wide range of science communication approaches to a variety of audiences.

**Reading and resource list**

Unit 3

Designing and delivering practical science communication

Start date 19 April 2021
End date 21 June 2021
Day 19 April 2021
10 May 2021
7 June 2021
21 June 2021
Time 9.30-17.00 each day
Venue Madingley Hall, Madingley, Cambridge, CB23 8AQ
Tutor(s) Dr Jane Gregory
No of meetings 4 day-schools

Aims

This module will develop and demonstrate students’ competence in science communication practice by:

- supporting the students in designing and planning a science communication event or product to the standards of public communication
- encouraging and rewarding adherence to timetables, regulation, custom and practice
- exercising and developing the students’ skills in evaluation
- developing competence in teamwork and mutual support

Indicative content

- pitching and proposing science communication activities
- preparation: research, organisation, scheduling and rehearsing
- delivery: performance and supporting materials and equipment
- evaluation: critical responses to one’s own and others’ work

Presentation of the unit

By this stage of the programme, students will be working on individual projects. They will have access to face-to-face and online tutorials as appropriate while they develop their project. The day-schools will be occasions for sharing problems and trying out strategies with the group, as well as providing an opportunity for charting progress and setting standards. The day-schools will be scheduled in detail once the projects are chosen: they may lend themselves to sub-groups having specialist further training, or reveal gaps in the teaching so far that can now be filled. The tutors will therefore be responsive to student needs, with the core aim of readying the class for assessment by the end of the unit.
Students will be rehearsing in front of classmates, commenting on other students' work, and organising themselves for their final performance.

**Student assessment**

Students will be assessed summatively using a reflective and critical account of the pitching, production, delivery and evaluation of an event or activity. (15 credits)

**Closing date for the submission of assignments:** Monday 5 July 2021 by 12:00 (noon) British Summer Time

Students are expected to submit their assignments online through ICE’s Virtual Learning Environment (VLE) and feedback on assignments is delivered online.
Learning outcomes

When they have completed this unit, the students should have achieved the following outcomes:

Knowledge and understanding

- Improved understanding of how the needs of audiences frame science communication practice
- Enhanced knowledge and understanding of pitching, proposing and evaluating science communication
- Increased ability to understand and respond to local schedules and regulation
- Awareness of professional and public standards
- Awareness of capacities and limits of given resources
- Insight into potential audiences
- Enhanced capacity for critical and evaluative discussion that extends understanding of key ethical and moral issues in science communication
- Improved decision-making about which methods to use for reaching a wider range of audiences, and for which purposes.

Skills and other attributes

- Advanced competence in the core skills of writing and speaking
- Competence in proposing and pitching a science communication project
- Enhanced capacity to be a critical friend to others’ work
- Enhanced ability to match skills to media and audiences
- Demonstrated capacity to design, implement and evaluate a science communication activity from start to finish
- Improved ability to plan, organise and deliver on time.

Reading and resource list

Students will compile their own reading list and gather resources as needed, depending on their choice of project.

Portfolio

Student assessment

In addition to the unit assignments, students will be required to submit a portfolio of science communication items (15 credits). These items should not have been submitted for credit elsewhere during the course, but might include, for example, a critical review of an item submitted for credit earlier in the course. Items from the students’ workplace are also eligible, provided due credit is given to any other contributors. The portfolio should
show a wide range of skills, and so should include a minimum of two items related to each unit (800-1000 words per unit).

**Closing date for the submission of the portfolio: Monday 19 July 2021 by 12:00 (noon) British Summer Time**

Students are expected to submit their assignments online through ICE’s Virtual Learning Environment (VLE), and feedback on assignments is delivered online via the VLE.

**Learning outcomes**

The Portfolio contains a selection of the student’s own work that is not submitted for assessment elsewhere on the programme. The learning outcomes are therefore particular to each student, and are likely to reflect the learning outcomes across the programme. These outcomes could therefore be any of the following:

**Knowledge and understanding**

- Enhanced knowledge and understanding of the role and application of theory to science communication practice
- Increased understanding of the political contexts that frame science communication
- Improved awareness of the academic literature that supports effective communication and engagement
- Improved understanding of how the needs of audiences frame science communication practice
- Enhanced knowledge and understanding of pitching, proposing and evaluating science communication
- Increased ability to understand and respond to local schedules and regulation
- Awareness of professional and public standards
- Awareness of capacities and limits of given resources
- Insight into potential audiences
- Enhanced systematic knowledge and critical understanding of the significance, relevance and range of science communication in the global community
- Enhanced ability to critically evaluate subject matter to identify what could or should be reported in the public domain
- Enhanced capacity for critical and evaluative discussion that extends understanding of key ethical and moral issues in science communication
- Improved decision-making about which methods to use for reaching a wider range of audiences, and for which purposes.

**Skills and other attributes**

- Advanced competence in the core skills of writing and speaking
- Improved communication skills across a range of areas as well as in a specific area of interest
- Enhanced familiarity with audio-visual and digital technology
- Competence in proposing and pitching a science communication project
- Enhanced capacity to be a critical friend to others’ work
- Enhanced ability to match skills to media and audiences
- Demonstrated capacity to design, implement and evaluate a science communication activity from start to finish
- Enhanced adaptable skills for the delivery of a wide range of science communication approaches to a variety of audiences.
- Improved ability to plan, organise and deliver on time.
